

2023 Annual Drinking Water Quality Report

(Testing Performed January through December 2022)

WATER WORKS OF THE TOWN OF SWEETWATER

PWSID AL0000918
P.O. Box 33
Sweetwater, AL 36782
Phone 334-994-4120
www.townofsweetwater.com

We are pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources.

Water Source	One (1) groundwater well producing from the Nanafalia aquifer		
Other Connections	Myrtlewood Water System as back up source		
Water Treatment	Chlorination		
Storage Capacity	One tank with a total capacity of 100,000 gallons		
Number of Customers	Approximately 155		
City Council	Chad Broussard, Mayor	Miranda Blakeney, Council	
	Jimmy Davis, Mayor pro tem	Ken McClantoc, Council	
	Sandra Etheridge, Council	Patrick Robison, Council	

Source Water Assessment

In compliance with the Alabama Department of Environmental Management (ADEM), Water Works of the Town of Sweetwater has developed a Source Water Assessment plan that will assist in protecting our water sources. This plan provides additional information such as potential sources of contamination. It includes a susceptibility analysis, which classifies potential contaminants as high, moderate, or non-susceptible to contaminating the water source. The assessment has been performed, public notification was completed on July 8, 2002, and the plan has been approved by ADEM. A copy of the report is available in our office for review during regular business hours, or you may purchase a copy upon request for a nominal reproduction fee. Please help us make this effort worthwhile by protecting our source water. Carefully follow instructions on pesticides and herbicides you use for your lawn and garden, and properly dispose of household chemicals, paints and waste oil.

General Information

All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. MCL's, defined in a List of Definitions in this report, are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and radioactive material, and it can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water run-off, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, storm water run-off, and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water.

Some people may be more vulnerable to contaminants in drinking water than the general population. People who are immunocompromised such as cancer patients undergoing chemotherapy, organ transplant recipients, HIV/AIDS positive or other immune system disorders, some elderly, and infants can be particularly at risk from infections. People at risk should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Based on a study conducted by ADEM with the approval of the EPA a statewide waiver for the monitoring of asbestos and dioxin was issued. Thus, monitoring for these contaminants was not required.

Information about Lead

Lead in drinking water is rarely found in source water but is primarily from materials and components associated with service lines and home plumbing. Your water system is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Use *only* water from the cold-water tap for drinking, cooking, and *especially for making baby formula*. Hot water is more likely to cause leaching of lead from plumbing materials. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. These recommended actions are very important to the health of your family. Lead levels in your drinking water are likely to be higher if:

- Your home or water system has lead pipes, or
- Your home has faucets or fittings made of brass which contains some lead, or
- Your home has copper pipes with lead solder and you have naturally soft water, and
- Water often sits in the pipes for several hours.

If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water hotline or at www.epa.gov/safewater/lead.

Questions?

We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the fourth Monday of the following months, January, April, July, and October, at 5:30 P.M. at Town Hall, 31380 AL Hwy 10.. If you have any questions about this report or concerning your water utility, please contact Terry Tyson at 334-422-1408 or Corey Martin at 334-413-0983. More information about contaminants to drinking water and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (1-800-426-4791).

Monitoring Schedule and Results

Your water sources are routinely monitored for constituents in your drinking water according to Federal and State laws. ADEM allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. This report contains results from the most recent monitoring which was performed in accordance with the regulatory schedule.

Constituents Monitored	Sweetwater	Myrtlewood
Inorganic Contaminants	2022	2022
Lead/Copper	2020	2020
Microbiological Contaminants	current	current
Nitrates	2021	2022
Radioactive Contaminants	2019	2019
Synthetic Organic Contaminants (including herbicides and pesticides)	2022	2020
Volatile Organic Contaminants	2020	2022
Disinfection By-products	2022	2022
PFAS Contaminants	2020	2020

The table below shows only those contaminants that had some level of detection. We are pleased to report that our drinking water meets federal and state requirements. This report shows our water quality and what it means.

Sweetwater Water Works DETECTED DRINKING WATER CONTAMINANTS						
Contaminants	Violation Y/N	Level Detected	Unit Msmt	MCLG	MCL	Likely Source of Contamination
Barium	NO	0.03				
Copper	NO	0.220 *	ppm	1.3	AL=1.3	Household plumbing corrosion; erosion; preservative leaching
Lead	NO	0.004 *	ppm	0	AL=0.015	Household plumbing corrosion, erosion
TTHM [Total trihalomethanes]	NO	Maxx LRAA 52.0 (3.00-52.0)	ppb	0	80	By-product of drinking water chlorination.
HAA5 [Total haloacetic acids]	NO	Maxx LRAA 11.9 (3.10-30.0)	ppb	0	60	By-product of drinking water chlorination
Secondary Contaminants						
Chloride	NO	56.9	ppm	none	250	Naturally occurring in the environment or from runoff
Hardness	NO	88.5	ppm	none	none	Naturally occurring or from water additives
Iron	NO	0.04	ppm	none	0.30	Naturally occurring; erosion; leaching from pipes
pH	NO	7.4	S.U.	none	none	Naturally occurring or from water additives
Sodium	NO	126	ppm	none	none	Naturally occurring in the environment
Sulfate	NO	14.7	ppm	none	250	Naturally occurring in the environment; erosion
Total Dissolved Solids	NO	429	ppm	none	500	Naturally occurring in the environment or from runoff
DSE Disinfection Byproducts						
TTHM [Total trihalomethanes]	NO	16.1-65.7	ppb	0	80	By-product of drinking water chlorination.
HAA5 [Total haloacetic acids]	NO	2.67-14.1	ppb	0	60	By-product of drinking water chlorination

* Figure shown is 90th percentile and number of sites above the Action Level (AL) = 0

Per- and polyfluoroalkyl substances (PFAS) are a group of man-made chemicals that were used in the manufacture of nonstick cookware, stain-resistant carpet and textiles, firefighting foams, food wrappers, and other industrial and consumer applications. Below is a list of PFAS contaminants for which our source was monitored in 2020 as required and the results of that monitoring. For more information on PFAS contaminants, please refer to www.epa.gov/pfas. PFAS was not detected in our drinking water.

Sweetwater Water Works - PFAS						
Contaminant	Unit	Detected	Contaminant	Unit	Detected	
11CI-PF3OUdS (11-chloroeicosfluoro-3-oxaundecane-1-sulfonic acid)	ppb	ND	Perfluoroheptanoic acid	ppb	ND	
9CI-PF3ONS (9-chlorohexadecafluoro-3-oxanone-1-sulfonic acid)	ppb	ND	Perfluorohexanesulfonic acid	ppb	ND	
ADONA (4,8-dioxa-3H-perfluorononanoic acid)	ppb	ND	Perfluorononanoic acid	ppb	ND	
HFPO-DA (Hexafluoropropylene oxide dimer acidA)	ppb	ND	Perfluorooctanesulfonic acid	ppb	ND	
NETFOSAA (N-ethylperfluorooctanesulfonamidoacetic acid)	ppb	ND	Perfluorooctanoic acid	ppb	ND	
NMeFOSAA (N-methylperfluorooctanesulfonamidoacetic acid0	ppb	ND	Perfluorotetradecanoic acid	ppb	ND	
Perfluorobutanesulfonic acid	ppb	ND	Perfluorotridecanoic acid	ppb	ND	
Perfluorodecanoic acid	ppb	ND	Perfluoroundecanoic acid	ppb	ND	
Perfluorohexanoic acid	ppb	ND	Total PFAS	ppb	ND	
Perfluorododecanoic acid	ppb	ND				

2022 MORs Reporting Non-compliance: Sweetwater Water and Sewer Board incurred a reporting non-compliance during June and December 2022 for failure to report the Monthly Operating Reports (MORs) to ADEM by the 10th of the following month. The ADEM Administrative Code R. 335-7-10.6 requires public water systems to submit Monthly Operating Reports (MORs) to the Department no later than 10 days after the end of the month in which the data was collected.

We have taken steps to ensure that the correct preparation and submittal of these monthly reports has become part of our standard monthly procedures. Your drinking water was monitored as required during the time of the late reports, and the results showed that the water quality was not adversely affected. If it had been, we would have notified you immediately. Should you have any questions concerning this violation or our monitoring requirements, please contact Terry Tyson at 334-422-1408 or Corey Martin at 334-413-0983.

Myrtlewood Water System DETECTED DRINKING WATER CONTAMINANTS							
Contaminants	Violation Y/N	Level Detected	Unit Msmt	MCLG	MCL	Likely Source of Contamination	
Barium	NO	ND-0.03	ppm	2	2	Discharge from drilling & metal refineries; erosion	
Copper	NO	0.920 * 0 >AL	ppm	1.3	AL=1.3	Household plumbing corrosion; erosion; wood preservative leaching	
Fluoride	NO	0.34-0.49	ppm	4	4	Erosion; water additive for teeth; fertilizer & aluminum factory discharge	
Lead	NO	0.002 ** 0 > AL	ppm	0	AL=0.015	Corrosion of household plumbing systems, erosion	
Nitrate (as Nitrogen)	NO	0.19-0.21	ppm	10	10	Fertilizer runoff; septic & sewage leaching, erosion	
TTHM [Total trihalomethanes]	NO	44.8-57.5	ppb	0	80	By-product of drinking water chlorination	
HAA5 [Total haloacetic acids]	NO	4.10-13.0	ppb	0	60	By-product of drinking water chlorination	
Unregulated Contaminants							
Chloroform	NO	1.70	ppb	n/a	n/a	Naturally occurring in the environment or from runoff	
Bromodichloromethane	NO	5.00	ppb	n/a	n/a	Naturally occurring in the environment or from runoff	
Chlorodibromomethane	NO	11.0	ppb	n/a	n/a	Naturally occurring in the environment or from runoff	
Bromoform	NO	6.00	ppb	n/a	n/a	Naturally occurring in the environment or from runoff	
Secondary Contaminants							
Chloride	NO	ND-59.8	ppm	n/a	250	Naturally occurring or from discharge or runoff	
Hardness	NO	7.3-101	ppm	n/a	n/a	Naturally occurring or from water treatment	
Iron	NO	0.08-0.10	ppm	n/a	0.30	Naturally occurring; erosion; leaching from pipes	
pH	NO	7.4-8.4	S.U.	n/a	n/a	Naturally occurring or from water treatment	
Sodium	NO	124-186	ppm	n/a	n/a	Naturally occurring in the environment	
Sulfate	NO	6.3-13.1	ppm	n/a	250	Naturally occurring or from discharge or runoff	
Total Dissolved Solids	NO	386-426	ppm	n/a	500	Naturally occurring or from discharge or runoff	

* Figure shown is 90th percentile of distribution sites sampled. Number of sites above action level (1.30 ppm) =0

** Figure shown is 90th percentile of distribution sites sampled. Number of sites above Action Level (0.015 ppm) =0

Below is a list of PFAS contaminants for which our source was monitored in 2020 as required and the results of that monitoring. For more information on PFAS contaminants, please refer to www.epa.gov/pfas. PFAS was not detected in our drinking water.

Definitions

Action Level- the concentration of a contaminant that, if exceeded, triggers treatment or other requirements which a water system must follow.

Coliform Absent (ca)- Laboratory analysis indicates that the contaminant is not present.

Cryptosporidium- a microscopic parasite that can cause disease, mainly diarrhea, if swallowed.

Disinfection byproducts (DBPs)- are formed when disinfectants used in water treatment plants react with bromide and/or natural organic matter (i.e., decaying vegetation) present in the source water.

Distribution System Evaluation (DSE)-a 4-quarter study to identify distribution system locations with high concentrations of DBPs.

Maximum Contaminant Level (MCL) is the highest level of a contaminant that is allowed in drinking water.

Maximum Contaminant Level Goal (MCLG)- the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL)- the highest level of a disinfectant allowed in drinking water

Maximum Residual Disinfectant Level Goal-(MRDLG) the level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Millirems per year (mrem/yr)-measure of radiation absorbed by the body.

Nephelometric Turbidity Unit (NTU)-a measure of the clarity of water.

Non-Detect (ND)- laboratory analysis indicates that the constituent is not present above detection limits of lab equipment.

Parts per billion (ppb) or Micrograms per liter ($\mu\text{g/l}$)-one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per million (ppm) or Milligrams per liter (mg/l)-one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per quadrillion (ppq) or Picograms per liter (picograms/l)-one part per quadrillion corresponds to one minute in 2,000,000,000 years, or a single penny in \$10,000,000,000,000.

Parts per trillion (ppt) or Nanograms per liter (nanograms/l)-one part per trillion corresponds to one minute in 2,000,000 years, or a single penny in \$10,000,000,000.

Picocuries per liter (pCi/L)-picocuries per liter is a measure of the radioactivity in water.

Running Annual Average (LRAA)-yearly average of all the DPB results at each specific sampling site in the distribution system.

Standard Units (S.U.)-pH of water measures the water's balances of acids and bases and is affected by temperature and carbon dioxide gas.

Treatment Technique (TT)- a required process intended to reduce the level of a contaminant in drinking water.

Variances & Exemptions (V&E)-State or EPA permission not to meet an MCL or a treatment technique under certain conditions.

Below is a table of contaminants for which the Environmental Protection Agency and the Alabama Department of Environmental Management require testing where applicable. These contaminants were not detected in your drinking water unless they are also listed in the Detected Drinking Water Contaminants table elsewhere in this report.

STANDARD LIST OF PRIMARY DRINKING WATER CONTAMINANTS					
Contaminant	MCL	Unit of Msmt	Contaminant	MCL	Unit of Msmt
Bacteriological Contaminants			cis-1,2-Dichloroethylene	70	ppb
Total Coliform Bacteria	<5%	present/absent	trans-1,2-Dichloroethylene	100	ppb
Fecal Coliform and E. coli	0	present/absent	Dichloromethane	5	ppb
Turbidity	TT	NTU	1,2-Dichloropropane	5	ppb
Cryptosporidium	TT	Calc.organisms/l	Di (2-ethylhexyl)adipate	400	ppb
			Di (2-ethylhexyl)phthalate	6	ppb
Radiological Contaminants					
Beta/photon emitters	4	mrem/yr	Dinoseb	7	ppb
Alpha emitters	15	pCi/l	Dioxin [2,3,7,8-TCDD]	30	ppq
Combined radium	5	pCi/l	Diquat	20	ppb
Uranium	30	pCi/l	Endothall	100	ppb
			Endrin	2	ppb
Inorganic Chemicals					
Antimony	6	ppb	Epichlorohydrin	TT	TT
Arsenic	10	ppb	Ethylbenzene	700	ppb
Asbestos	7	MFL	Ethylene dibromide	50	ppt
Barium	2	ppm	Glyphosate	700	ppb
Beryllium	4	ppb	Heptachlor	400	ppt
Cadmium	5	ppb	Heptachlor epoxide	200	ppt
Chromium	100	ppb	Hexachlorobenzene	1	ppb
Copper	AL=1.3	ppm	Hexachlorocyclopentadiene	50	ppb
Cyanide	200	ppb	Lindane	200	ppt
Fluoride	4	ppm	Methoxychlor	40	ppb
Lead	AL=15	ppb	Oxamyl [Vydate]	200	ppb
Mercury	2	ppb	Polychlorinated biphenyls	0.5	ppb
Nitrate	10	ppm	Pentachlorophenol	1	ppb
Nitrite	1	ppm	Picloram	500	ppb
Selenium	.05	ppm	Simazine	4	ppb
Thallium	.002	ppm	Styrene	100	ppb
			Tetrachloroethylene	5	ppb
Organic Contaminants					
2,4-D	70	ppb	Toluene	1	ppm
Acrylamide	TT	TT	Toxaphene	3	ppb
Alachlor	2	ppb	2,4,5-TP(Silvex)	50	ppb
Atrazine	3	ppb	1,2,4-Trichlorobenzene	.07	ppm
Benzene	5	ppb	1,1,1-Trichloroethane	200	ppb
Benzo(a)pyrene [PAHs]	200	ppt	1,1,2-Trichloroethane	5	ppb
Carbofuran	40	ppb	Trichloroethylene	5	ppb
Carbon tetrachloride	5	ppb	Vinyl Chloride	2	ppb
Chlordane	2	ppb	Xylenes	10	ppm
Chlorobenzene	100	ppb			
Dalapon	200	ppb	Disinfectants & Disinfection Byproducts		
Dibromochloropropane	200	ppt	Chlorine	4	ppm
1,2-Dichlorobenzene	1000	ppb	Chlorine Dioxide	800	ppb
1,4-Dichlorobenzene (para)	75	ppb	Chloramines	4	ppm
o-Dichlorobenzene	600	ppb	Bromate	10	ppb
1,2-Dichloroethane	5	ppb	Chlorite	1	ppm
1,1-Dichloroethylene	7	ppb	HAA5 [Total haloacetic acids]	60	ppb
			TTTH [Total trihalomethanes]	80	ppb

LIST OF SECONDARY CONTAMINANTS

Alkalinity, Total (as Ca, CO_3)	Copper	Manganese	Specific Conductance
Aluminum	Corrosivity	Odor	Sulfate
Calcium, as Ca	Foaming agents (MBAS)	Nickel	Total Dissolved Solids
Carbon Dioxide	Hardness	pH	Zinc
Chloride	Iron	Silver	
Color	Magnesium	Sodium	

LIST OF UNREGULATED CONTAMINANTS

Aldicarb	Chloroethane	Dieldrin	Propachlor
Aldicarb Sulfone	Chloroform	Hexachlorobutadiene	N-Propylbenzene
Aldicarb Sulfoxide	Chlormethane	3-Hydroxycarbofuran	Propachlor
Aldrin	O-Chlorotoluene	Isopropylbenzene	1,1,1,2-Tetrachloroethane
Bromoacetic Acid	P-Chlorotoluene	p-Isopropyltoluene	1,1,2,2-Tetrachloroethane
Bromobenzene	Dibromochloromethane	M-Dichlorobenzene	Tetrachloroethene
Bromoform	1,2-Dibromoethane	Methomyl	Trichloroacetic Acid
Bromomethane	Dibromomethane	Methylene chloride	1,2,3-Trichlorobenzene
Bromodichloromethane		Methyl tert-butyl ether	Trichloroethene
Bromoform	1,1-Dichloroethane	Metolachlor	Trichlorofluoromethane
Bromomethane	1,3-Dichloropropane	Metribuzin	1,2,3-Trichloropropane
Butachlor	2,2-Dichloropropane	Naphthalene	1,2,4-Trimethylbenzene
N-Butylbenzene	1,1-Dichloropropene	MTBE	1,3,5-Trimethylbenzene
Sec-Butylbenzene	1,3-Dichloropropene	Naphthalene	
Tert - Butylbenzene	Dicamba	1-Naphthol	
Carbaryl	Dichlorodifluoromethane	Paraquat
